1. Document Information

Project Name	Retail Sales Performance Dashboard
Document Version	1.0
Date	May 2026
Author	Vinit Borse
Status	Final Draft
Reporting Tool	Microsoft Power BI Desktop
Data Source	Adidas_US_Sales_Datasets.xlsx

2. Executive Summary

Adidas US requires a centralized, interactive reporting solution to monitor retail sales performance across its retailer network, US geography, product portfolio, and sales channels for the 2020–2021 period. Existing reporting is fragmented across Excel workbooks, which makes it difficult for leadership to identify trends, top performers, and underperforming segments in a timely manner.

This project delivers a three-page Power BI dashboard that consolidates 9,648 sales transactions into a single, self-serve analytical view, supporting executive KPI monitoring, product-level drill-through analysis, and regional performance breakdowns with full month-over-month and year-to-date time intelligence.

3. Business Objectives

- Establish a single source of truth for Adidas US sales performance across retailers, regions, products, and channels.
- Enable leadership to identify revenue drivers, profitability gaps, and seasonal trends without manual Excel analysis.
- Support data-driven decisions on inventory allocation, channel mix, and regional promotional spend.
- Reduce report-preparation time for the sales operations team through self-serve filtering and drill-through navigation.

4. Project Scope

4.1 In Scope

- Adidas US sales transactions for calendar years 2020 and 2021.
- Six retailers: Foot Locker, West Gear, Sports Direct, Kohl's, Amazon, and Walmart.
- 50 US states grouped under five regions: West, Northeast, South, Southeast, and Midwest.
- Six product categories: Men's and Women's Street Footwear, Athletic Footwear, and Apparel.
- Three sales channels: In-store, Outlet, and Online.
- KPIs and time-intelligence measures including MoM, MTD, and YTD vs Goal.

4.2 Out of Scope

- Real-time or streaming data refresh.
- Predictive forecasting or ML-based recommendations.
- Non-US markets, competitor data, or external benchmarks.
- Customer-level (PII) analysis.

5. Stakeholders

Stakeholder	Role	Interest
Sales Leadership	Primary user	Overall performance versus goals
Regional Sales Managers	Secondary user	State and region-level performance
Marketing Team	Secondary user	Channel and product trend analysis
Finance	Reviewer	Operating profit and margin validation
BI / Data Team	Developer	Build, maintain, and refresh the dataset
Project Sponsor	Approver	Sign off on requirements and delivery

6. Data Requirements

- **Source file:** Adidas_US_Sales_Datasets.xlsx (single workbook, one sheet).
- **Record count:** approximately 9,648 transactional rows.
- **Date range:** January 1, 2020 – December 31, 2021.
- **Columns (14):** Retailer, Retailer ID, Invoice Date, Region, State, City, Product, Price per Unit, Units Sold, Total Sales, Operating Profit, Operating Margin, and Sales Method.

6.1 Transformations (Power Query)

Promote headers, remove leading blank rows and columns, cast Invoice Date to date type and numerics to appropriate types, build a dedicated Date dimension table (Year, Quarter, Month, Month Name, Day), and add calculated columns required for time intelligence.

7. Functional Requirements

7.1 Page 1 — Executive Summary

- KPI cards for Total Sales, Units Sold, and Total Operating Profit.
- Total Sales by Product (clustered column chart).
- Total Sales and Operating Profit by Retailer (combo chart).
- Percentage of Total Sales by Sales Method (donut chart).
- Total Sales by Month (line chart).
- Total Sales by State (filled map).
- Month and Region slicers, a Reset bookmark, and a Drill-through button to the Product report.

7.2 Page 2 — Product Drill-through Report

- Page filtered by the product selected on Page 1.
- MTD vs Goal KPI with sparkline.
- YTD vs Goal KPI with sparkline.
- Year slicer.
- Detail table showing Year, Month, Total Sales, Previous Sales, and MoM Growth percentage with up/down conditional formatting.
- Retailer combo chart filtered by selected product.
- State-level filled map filtered by selected product.
- Home button to return to Page 1.

7.3 Page 3 — Regional Breakdown

- Sales distribution by Region with percentage labels: West (30%), Northeast (20.7%), South (18.13%), Southeast (16.08%), and Midwest (15.09%).

8. Non-Functional Requirements

- **Performance:** all visuals load within five seconds on initial open and within two seconds on slicer change.

- **Usability:** the dashboard must be fully navigable by non-technical users through slicers, buttons, and drill-through, without requiring filter-pane interaction.
- **Scalability:** the data model must support adding future years without structural rework.
- **Maintainability:** all DAX measures organized in a dedicated measure table; all Power Query steps documented.
- **Security:** report published to Power BI Service with workspace-level access control. Row-level security is not required for v1.0.

9. Assumptions

- Source data is clean and reconciled with Adidas Finance.
- Operating Margin in source is pre-calculated and considered accurate.
- All monetary values are in USD.
- MTD and YTD goal values are derived from prior-year baselines.
- End users have Power BI Pro licenses to access the published report.

10. Constraints

- Data limited to 2020–2021 only.
- Single Excel file as source; no live database connection in v1.0.
- Power BI map visual is being deprecated; migration to Azure Maps is planned for a future release.

11. Acceptance Criteria

- KPI values reconcile to the source data within $\pm 0.1\%$.
- Slicers, drill-through, and reset bookmark function as designed.
- MoM, MTD, and YTD calculations match manual Excel validation for three sample products.
- Dashboard renders correctly on desktop (16:9) and Power BI mobile layout.
- Sign-off received from Sales Leadership and Finance.

12. Risks

Risk	Impact	Mitigation
Map visual deprecation	Medium	Migrate to Azure Maps in next release

Risk	Impact	Mitigation
Single-source dependency	Medium	Document refresh process; plan SQL migration
User adoption	Low	Provide one-page user guide and training session

13. Glossary

Term	Definition
BRD	Business Requirements Document
DAX	Data Analysis Expressions, the formula language used in Power BI
KPI	Key Performance Indicator
MoM	Month-over-Month
MTD	Month-to-Date
YTD	Year-to-Date
YoY	Year-over-Year
Power Query (M)	Power BI's data transformation language
